

THE FUTURE OF URBAN FITNESS

FLIPFIT

TEAM CHI

THE CHALLENGE

- Context: Flipkart is entering the fitness space by partnering with local gyms across Bangalore.
- Objective: The goal was to design a comprehensive UI and backend system for this new venture.
- Key Requirement: The system needed to bridge the digital gap between gym facility owners and everyday fitness enthusiasts.

PROJECT VISION & GOALS

- User Experience: Create a user-friendly booking system that allows customers to book specific time slots.
- Partner Empowerment: Enable gym owners to register easily and facilitate their facility setup.
- Operational Efficiency: Provide options for owners to define custom slots and manage seat capacity efficiently.
- Transparency: Ensure real-time visibility of available gym slots in specific locations.

MEET THE TEAM & STAKEHOLDERS

The Development Team (CHI):

Nitheezkanth (GL)
Harshi Maniar (Sub GL)
Sasi Ranga Raidu
Sujitha Duddekunta
Akshita Kolisetty
Bedasnata Das
Partik Sarvaiya
Ananya
Anushka Gautam

Project Stakeholders:

Sponsors: Flipkart
SME: Amit Kumar Balyan

DEVELOPMENT METHODOLOGY

- Planning: Setting daily targets to maintain momentum.
- Collaboration: Active resolution of doubts and management of code conflicts.
- Upskilling: Dedicating 25% of effort to learning new topics and technologies
- Execution: Transforming UML designs into functional code and discussing progress regularly.

TECHNOLOGY STACK

We utilized a robust, standard industry stack:

- **Core Language:** Java
- **API Framework:** Dropwizard (for efficient REST API communication)
- **Database:** MySQL (for persistent data storage)
- **Build Tool:** Maven
- **Version Control:** Git/GitHub

ENGINEERING STANDARDS

We adhered to strict engineering best practices to ensure maintainability:

- Code Quality: Implementation of "Clean Code" principles and code refactoring.
- Architecture: Modularisation of components.
- Robustness: comprehensive exception handling to prevent crashes.
- Optimization: Focus on performance optimization.

EXECUTION ROADMAP

Our step-by-step approach to building FlipFit:

1. Foundations: Developed detailed UML diagrams to solidify project understanding.
2. Structure: Created the foundational Java code structure, separating Beans, Client, and Business logic layers.
3. Integration: Established connectivity with the MySQL database.
4. Interface: Implemented REST APIs using Dropwizard.

CHALLENGES & LEARNINGS

We faced and overcame several hurdles during the project:

- Debugging: Handling unexpected bugs and logic issues.
- Adaptation: Rapidly learning new technologies like Dropwizard.
- Teamwork: Collaborating effectively to merge code and avoid conflicts.
- Time Management: Delivering a full-stack solution under tight deadlines.
